

The first true end-to-end, transformative QA software solution for Insurance that accelerates time-to-market and ensures regulatory compliance.

### The QMT Ecosystem

A modular solution purpose-built for insurance with flexible, configurable components tailored to enterprise QA testing needs.

#### QMT

Workflow Validation

##### Use AI to Build Object Repository

QMT AI Assistant reduces 80% of the time-to-build Object Repository by automating the retrieval of the optimal XPath for selected elements in the application under test.

##### Improve Product Speed to Market

QMT discovers all defects early, delivering the level of quality needed to meet product launch dates.

##### Reduce Quality-Related Day 2 Issues

QMT enables IT executives to get more value from the dollars they're already spending by testing 100 percent of the value chain, providing the fewest quality-related Day 2 Issues, and reducing the inherent risks.

##### Full Coverage at a Fraction of the Cost

Using a knowledge graph model removes manual testing, human error and extends visibility of QA for new products to well-informed business analysts.

#### QMT True PDF

PDF Document Validation

##### Ensure Compliance and Accuracy

Automatically detect data errors, missing fields, and formatting issues to meet regulatory requirements and reduce compliance risks.

##### Accelerate Processing Times

Streamline document validation workflows to speed up policy issuance, claims processing, and underwriting decisions

##### Improve Data Quality and Consistency

Validate against business rules and standards to ensure clean, reliable data across all submitted forms and documents.

##### Reduce Operational Costs

Eliminate manual review and rework by automating PDF validation, lowering overheads and minimizing costly errors.

## QMT True XML

### Transaction Data Validation

#### Drive Top-line Sales Growth

Eliminate manual observation to verify the correctness of policy application data, thereby speeding better-quality product to market and driving top-line sales growth.

#### Increase Efficiency, Slash NIGO Rates

QMT TrueXML confirms 100% validity of transient data by automating the comparison of expected and actual results, increasing process efficiency and improving NIGO rates.

#### Reduce Reputational Risk

Easy to understand, detailed reports, featuring unique result codes, save time by making it easy to find and correct data defects quickly, improving efficiency and distributor satisfaction while reducing reputational risk.

#### Improve Compliance Posture

Helps organizations test more than the “happy path” to find defects earlier, reducing reputational risk and improving compliance posture.

#### Insurance Carrier Results:

- 30x increase in automated test coverage vs. traditional manual testing methods
- 80% reduction in FTE demand for QA capabilities due to increasing the level of automation
- Shifts from around 2,500 manual person-hours to 30 hours of automated testing runtime at a reduced economic cost

#### About Emtech Group, Inc.

Emtech Group Inc is the leading provider of enterprise software quality engineering solutions for validating insurance value chains for Insurance Carriers, Insurtechs and software vendors. Our customers are enabled to deliver quality products while avoiding the expensive and embarrassing consequences of the exposure of production defect leakage. Emtech Group drives key business outcomes for IT and transforms the way testing is completed, coverage is achieved, and the business partners with IT.

## AI Assistant

### AI Powered

#### Accelerate Workflow Model Creation

Quickly build and optimize workflow models with AI-driven object repository.

#### Fast Object Repository Development

Dramatically reduce time spent creating object repositories with automated optimal XPath retrieval.

#### Increased Accuracy in Element Selection

Ensure precise identification of UI elements, minimizing errors in automated tests.

#### Boost Testing Efficiency

Streamline the test development process and shorten release cycles with AI-powered automation.

***“Manual quality assurance testing introduces delays and increase the risk of human error. QMT brings much-needed automation to quality control, helping carriers maintain compliance and improve turnaround times.”***
